

KEVIN BRODZINSKI

AI SYSTEMS ARCHITECT | ZERO-TO-ONE PRODUCT LEADER | ENTERPRISE OPERATOR

Venice, CA | 561-212-9938 | kevinbrodzinski@gmail.com | kevinbrodzinski.com | linkedin.com/in/kevin-brodzinski

EXECUTIVE PROFILE

Zero-to-one AI systems architect, founder, and enterprise operator who turns ambiguous, cross-domain problems into working systems. Works across engineering, product, sales / GTM, operations, and company-building, treating the business as one coupled system: capability, customer value, execution efficiency, revenue / margin, and team alignment should improve together. Operates from first-principles architecture through implementation, evaluation, governance, commercialization, and organizational execution. Current work spans DENSITY, TraceScript, Sphira, FLOQ, and successive frontier intelligence research architectures SAPPHIRE and KRYSTAL.

250+ PATENT APPLICATIONS AUTHORED + FILED		INVENTION BREADTH Behavioral systems coordination social systems finance + banking cybersecurity computational intelligence mathematics physics-informed systems complex AI architecture + governance		
\$30M revenue growth - RXO	\$17M revenue growth - XPO	700%+ YoY growth - Capstone	10+ products / MVPs	29 public research papers

CORE CAPABILITIES

AI / SYSTEMS: Agentic AI + tool use | persistent memory / RAG / retrieval integrity | AI security + trusted-state governance | evals / evidence / replay | human-in-the-loop systems
BUILD: React / TypeScript | Supabase / PostgreSQL | pgvector | PostGIS | Realtime | Edge Functions | event-driven workflows | AI-assisted development
BUSINESS / PRODUCT / GTM: 0-to-1 product discovery | engineering-product-GTM translation | enterprise workflow + process design | pricing / unit economics | revenue + margin | operating efficiency | cross-functional alignment | pilots / strategic accounts

EXPERIENCE

- Founder & AI Systems Architect | FLOQ, Inc.

2025 - Present

Venice, CA | *Building AI systems across enterprise intelligence, agentic security, real-world coordination, governed intelligence, and frontier superintelligence research.*

 - Originated DENSITY, TraceScript, Sphira, FLOQ, SAPPHIRE, KRYSTAL, and shared governed-intelligence architectures; translated original research into product models, runtime flows, reference software, and enterprise use cases.
 - Authored and filed 250+ patent applications and published 29 papers / technical manuscripts across behavior, coordination, social systems, finance + banking, cybersecurity, computational intelligence, mathematics, physics-informed systems, and complex AI architecture + governance.
 - **SAPPHIRE / KRYSTAL** - originated successive superintelligence research architectures: SAPPHIRE explores coordination-physics and living-medium intelligence; KRYSTAL extends the program through coordination-sensitivity and living-geometry models for adaptive, response-aware intelligence.
 - **DENSITY** - designed response-aware organizational intelligence that converts work signals into inferred coordination state, bounded intervention paths, replayable outcomes, and learned response history; produced product architecture, data models, and production-oriented build packs.
 - **TraceScript** - created adaptive substrate security for agentic AI spanning memory / RAG / policy integrity, trusted-state formation, quarantine, repair, replay, and bounded action semantics rather than relying only on point-in-time output filtering.
 - **Sphira** - invented a privacy-preserving, witness-hiding action-authority protocol for high-consequence AI and machine actions: verify that an exact action is authorized before execution without exposing protected witness material.
 - **FLOQ** - conceived and built substantial working reference software for real-world coordination spanning social discovery, groups, realtime / geospatial state, verification, rewards, wallets, treasuries, attribution, and coordination intelligence.
 - Built substantial full-stack reference systems with React / TypeScript, Supabase / PostgreSQL, pgvector, PostGIS, Realtime, Edge Functions, and AI-assisted development; designed explicit state, authorization, evidence, replay, and recovery paths.
- Vice President of Sales / Early CTO | Stic Solutions, Inc.

2024 - 2025

Santa Monica, CA | *Adtech startup focused on mobile out-of-home advertising.*

 - Built the outbound sales engine, closed national-brand pilots including Hyundai Capital, Whims, and Passes, and grew pipeline to seven figures.
 - Led Sales, Client Success, and Partnerships; built CRM, pricing, compensation, onboarding, reporting, and pitch systems; increased campaign close rate by 40%.

Head of Client Strategy | Rocket Design

Los Angeles, CA | Zero-to-one product studio for early-stage companies.

- Scoped, sold, and helped ship 10+ MVPs and digital products; translated ambiguous founder requirements into product scope, UX, workflows, launch plans, and implementation decisions using Supabase, FlutterFlow, Webflow, and related stacks.
- Built Collaborate LA, a founder community / event series drawing 100+ founders per event and creating a repeatable channel for startup relationships and client acquisition.

2022 - 2024

EARLIER COMMERCIAL & ENGINEERING EXPERIENCE

Director, National Accounts - West Coast | RXO (formerly XPO)

Santa Monica, CA

- Generated approximately \$30M in new and existing revenue growth and increased revenue in underperforming accounts by 45% through service and engagement redesign.

2022 - 2023

Director, National Accounts | XPO Logistics (NYSE: XPO)

Los Angeles, CA

- Achieved approximately \$17M in revenue growth while managing 40 national accounts and coordinating execution across 30 teams and 8 divisions.

2021 - 2022

Business Development Manager | Capstone Logistics

Chicago, IL

- Top revenue generator with 700%+ year-over-year growth; secured \$3.1M in revenue and finished at 218% of target in 2020.

2019 - 2021

Founder / CEO | Good Circles Clothing

Chicago, IL

- Launched and operated a menswear brand across product, marketing, sales, and experiential activation; hosted 25+ pop-up events across major U.S. cities.

2017 - 2019

Stress Analysis Engineer | D3 Technologies

Dallas, TX

- Performed aerospace structural / stress analysis and weight-optimization work under engineering and regulatory constraints; reported a 5% aircraft-weight reduction in project work.

2013 - 2014

RESEARCH, INVENTION & SELECTED WORK

- Public research:** 29 papers and technical manuscripts across coordination, formation / recoverability, obstruction, resource geometry, substrate intelligence, governed systems, and explicitly bounded frontier programs.
- Invention portfolio:** 250+ patent applications authored and filed across behavioral systems, coordination, social systems, finance + banking, cybersecurity, computational intelligence, mathematics, physics-informed systems, and complex AI architecture + governance.
- Selected technical work:** DENSITY (enterprise intelligence), TraceScript (agentic AI security), Sphira (privacy-preserving cryptographic action authority), FLOQ (real-world coordination), SAPPHIRE + KRYSTAL (frontier intelligence research), Governed Creation, and Muon. Portfolio: kevinbrodzinski.com/work

EDUCATION & RECOGNITION

B.S., Mechanical Engineering | Southern Methodist University | 2011 - 2015

Provost Scholar; Engineering Fellows Scholar

Recognition: Global Leadership MVP Award (XPO, 2021); BDM of the Year (Capstone, 2020); Hyundai Capital pilot closer (Stic, 2025).

TECHNICAL TOOLKIT

React / TypeScript | Supabase | PostgreSQL | pgvector | PostGIS | Realtime | Edge Functions | Firebase | GitHub | Figma | Linear | AI-assisted development
